

Paul Walsh

COMPUTER SCIENTIST · AI INNOVATION LEADER · PROFESSOR · FOUNDER

More than 30 years exploring how artificial intelligence systems move from research into the real world. My work spans scientific research, entrepreneurship, product development and applied innovation - from pioneering AI papers in the 1990s to granted patents and AI-enabled products today.

Current focus

Artificial intelligence, innovation, products, operating models and agentic AI workflow automation.

PROFILE

I currently lead AI innovation at The Dock, Accenture's global innovation centre. I work with teams exploring emerging AI capabilities and turning them into useful products, services and new ways of working. My applied work has included pharma and life sciences, financial services, telecommunications, procurement and customer experience.

SELECTED EXPERIENCE

2022-present	AI Innovation Director The Dock / Accenture
2019-present	Accenture AI innovation and applied research
2016	Professor of Computer Science Teaching and academic leadership
2013-2017	Senior Research Fellow University of Edinburgh
2012	Founder & CTO Life-sciences software / bioinformatics

EDUCATION

2001	Ph.D. Machine Learning
1992	M.Sc. Neural Networks

RESEARCH & AI ENGINEERING

Four years as a Senior Research Fellow at the University of Edinburgh (2013-2017), working on multidisciplinary AI research in bioinformatics, precision medicine and computational life sciences, including contributions to the IEEE BioCompute standard.

Current research interests include AI in the software development lifecycle: context and specification, architecture, agent-assisted development, human oversight, verification, governance and reliable movement of AI-generated software into production.

I am also exploring agentic AI workflow automation: intelligent systems that coordinate tasks, tools and people across complex knowledge-work processes.

RESEARCH IMPACT

BEYOND TECHNOLOGY

I read, write, run and create. Recent creative work includes visual art and an AI-created music album, *To the Waters and the Wild*, released as The Northern Archipelago.

Selected record

Patents, awards, professional learning and public profiles

GRANTED U.S. PATENTS

US11468695B2 · GRANTED 2022

Substance description management based on substance information analysis using machine learning techniques [Google Patents](#)

US12198067B2 · GRANTED 2025

Systems and methods for synthesizing cross domain collective intelligence [Google Patents](#)

AWARDS & RECOGNITION

Kaggle COVID-19 Risk Factors CORD Competition Winner

Text-mining research on COVID-19 relevant factors.
